Title: Internship with Center for Neurodevelopmental and Imaging Research on motor imitation

Description: We are looking for a motivated and detail-oriented student interested in investigating motor control in children with developmental disorders (e.g., Autism). Our internship focuses on the investigation of motor control in children with Autism during a dance imitative task using motion capture tools. Interns will read and discuss literature pertaining to the task, and will work on preprocessing the motion capture data to obtain imitative skill measures. The internship could start in the late spring or into summer, with the potential to stay on in the future. Ideally, students would be able to contribute 10 hours per week to the lab. Interested students should contact rochowiak@kennedykrieger.org and tuncgenc@kennedykrieger.com.

Location:

Center for Neurodevelopmental and Imaging Research
Kennedy Krieger Institute
716 N Broadway
Baltimore, MD
