Title: Internship with Research Neurophysiology Laboratory at Kennedy Krieger Institute

Description: We are looking for motivated and detail-oriented students interested in investigating cognition and behavior in children with developmental disorders (e.g. Autism, Fragile-X, ADHD). Our internship focuses on the investigation of these children during imitative and auditory tasks using EEG methodologies. Interns will work on processing EEG and video capture data obtained during these tasks as well as read, discuss, and present literature pertaining to the tasks and methods. The internship could start in the late spring or into summer, with the potential to stay on in the future. Ideally, students would be able to contribute 10 hours per week to the lab. Interested students should contact lush@kennedykrieger.com.

Location:
